Google Public Data

November 3, 2015

Google has a handy interface for [public data](#) culled from an array of international as well as domestic sources. With the ability to quickly make graphs or charts, change your criteria, compare and adjust metrics it becomes a powerful tool for gathering information on populations.

How damaging are high debt levels?

Iceland, Ireland, Greece, and other countries have all made news due to their increasing debt levels. Other trends have been less reported on, though; notice, for instance, the high debt levels that Japan has sustained over decades or the outcome of the drastic measures taken in Argentina after that country's 2002 economic crisis.

Educational Statistics for States, Districts, and Schools

Data from National Center for Education Statistics, U.S. Department of Education; provided by American Institutes for Research

These data allow users to visualize different trends in public school education in the United States, from the 1986-87 to the 2009-10 school year, where available. Characteristics include counts of public school students, high school graduation rates, high school dropout rates, percentages of students by racial/ethnic background, student to teacher ratios, counts of English language learners, and counts of students with Individualized Education Plans. Users are able to select characteristics for individual schools, districts, or states of interest and compare with other jurisdictions in a single figure. For example, a user interested in high school graduation rates can select the Averaged Freshman Graduation Rate and then select different states of interest. The chart will display high school graduation rates for the selected states over time. For other characteristics, such as Student-to-Teacher ratios, a user can select a state and then select different school districts or individual schools to compare. For any visualization, users can choose to display line charts, bar charts, maps, or bubble charts. Users also have the option of animating bar charts, maps, and bubble charts over time by selecting the play button located on the bottom left of the chart.
